Q: Why is using an array illegal in C++? I'm new to C++. I learned that accessing the elements of an array is undefined behavior. Why is accessing the elements of an array illegal? Why does accessing the elements of an array on a pointer of type int* require undefined behavior? A: Arrays can decay to pointers, but you can't dereference a pointer to an array and get to its elements (unless it's a pointer to a function or a function object, or a pointer to a member, or any member of a polymorphic type). A: It is illegal to dereference an array: #include using namespace std; int main() { int * foo = new int[4]; foo[2] = 10; cout Q: css selector works in chrome but not in Firefox or IE I've tried everything I can think of - no way to make this work I have a variable on a page which is an "id" / "class" combination of a div.
