FileM Crack + Activator Free PC/Windows

===== FileM Free Download is a utility for Windows 2000/XP/Vista/2008/7. It enables you to monitor a selected directory, keeping track of all the file changes that take place in it. For each file and folder, FileM Serial Key records the last modification time and the last access time, including the system date and time. It can also generate reports about such events, enabling you to keep an eye on the changes that are happening to the monitored files. One of the most useful functions is that you can keep backups of the monitored directory, in order to prevent data loss. The program can, for example, create backup copies of files that are changed, or keep a copy of a file in case it is deleted from the directory. Of course, FileM is much more than a file monitoring and backup application. Its core is a powerful file change log tool that is equipped with numerous useful features, enabling you to monitor and log file changes in a number of ways. You may for example: * keep a log of all the file changes that occur in a directory (e.g. when you install a program); * keep a log of the file changes that occur in a directory for a given period of time; * keep a log of the file changes that occur in a directory for a given user; * keep a log of the file changes that occur in a directory by a given program; * keep a log of the file changes that occur in a directory for a given extension; * track the file changes in a directory when a file is copied, moved or renamed; * keep a log of the file changes in a directory when another application makes changes in the file; * keep a log of the file changes in a directory when a file is edited; * keep a log of the file changes in a directory when a file is copied to another directory; * keep a log of the file changes in a directory when a file is renamed; * keep a log of the file changes in a directory when a file is removed; * keep a log of the file changes in a directory when a file is deleted; * keep a log of the file changes in a directory when a file is created; * keep a log of the file changes in a directory when a file is added to the directory; * keep a log of the file changes in a directory when a file is moved to another directory; * keep a log of the file

FileM

FileM is a compact application that runs silently in the background and checks if any of your files change. It allows you to check and monitor the files for changes in just a single directory or a selected set of files. It monitors file format changes only and does not detect text changes. Install FileM on your computer for a silent monitoring of your files. No registration is required. FileM Features: Monitor one or many selected folders and files for changes. Create backups of your files.

Keep an eye on the activities of your internet explorer or Google Chrome. Run in the system tray. The application can detect file format changes only, such as JPEG, GIF, PDF, HTML, DOC and more. Create backups of your files - FileM will notify you and take a backup of the files when you save a document. Monitor all of your network drives for changes. FileM will monitor the files in all of the network drives in case there is some change in the folder. Set FileM to check only for a folder or a set of files. Quickly repair the changes detected by FileM. Run in the system tray. FileM License: The application is free to use. It will not irritate you with annoying pop-ups or advertisements. Screenshots: Start menu/Startup folder (Win98/2000/XP/Vista): Main window of FileM: Installation of FileM: There is no need to install FileM. It can be loaded from the start menu/startup folder. Instructions for the installation of FileM: You need to download FileM.zip and unzip it. Please move the extracted application to one of the desktops. Right-click on the FileM icon on the desktop. Select New -> Shortcut. Type the full path of the extracted FileM file. Select OK and then press Finish. If you want to keep the shortcuts to the FileM icon in the same place, just close the main FileM window. Delete the shortcut when you don't need it anymore. Now, you can access the application from the start menu/startup folder. Notification when a file is saved: I hope you enjoyed the tutorial. Please, leave some comments in case I managed to help you solve your problem. FileM is a file monitoring application
