AutoCAD 2017 supports 2D drafting, 3D modeling, 2D and 3D drawing, and advanced 2D engineering design. For many years, AutoCAD has offered only the simplest of two-dimensional drafting tasks. In 2017, the latest release of AutoCAD, known as AutoCAD 2017, includes these updates: Bivariate Curve Fitting Partial Function in Down Mode Drawing Geometry as Polygons Revised Drafting Tools Revised Lines Bivariate Curve Fitting AutoCAD 2017 lets you fit bivariate (two variable) data to a curved surface, such as an ellipse, parabola, or hyperbola. The fit tool is based on the eponymous Gauss-Newton algorithm. See the section "Fitting Curved Surfaces" for details. Partial Function in Down Mode AutoCAD 2017 lets you define an instance of a command, such as a plot command, by typing it in the command window, pressing Enter, and then typing in a series of commands. This allows you to save time by using the same series of commands repeatedly for different commands. When a series of commands can be defined as a single command and simply typed, it is known as a partial function. In AutoCAD 2017, partial functions are sometimes referred to as "commands in down mode" because you can define the series of commands in the command window of AutoCAD and then enter the commands in the drawing by using the down arrow keys. (The down arrow keys are located on the right side of the numeric keypad on a standard US keyboard.) In this example, the last two points of the drawing of a dog are plotted by using an inverse Z-axis to change from the default XY projection to a COORDS projection. Drawing Geometry as Polygons In AutoCAD 2017, you can use the Line tool to quickly draw a series of lines on a surface, such as a house or a part of a house. AutoCAD 2017 provides two new features for drawing on surfaces. The first is the ability to create a surface from multiple solid lines. To draw a surface from multiple solid lines, use the Surface command. (Surfaces cannot be created from polylines.) The second new feature is that the lines of the surfaces can be removed after they are created by using the

Interoperability The Windows API and the COM libraries (AutoCAD Serial Key R12 and later) provide interoperability with Windows applications. AutoCAD's API is also supported on the Android operating system using the Android Development Kit. AutoCAD's API can be extended to other applications on the Windows operating system. Other operating systems support Autodesk Fusion 360 with a bridge to AutoCAD Alignment In the Revit product line, alignment is an interactive editing mode for creating geometries. It is intended for use in advanced architectural design, where modeling limitations can make other means of establishing spacing more difficult or impractical. It is also similar to the Autodesk SketchUp 2017 and earlier styles. Partner programs Autodesk provides several partner programs to encourage third parties to market AutoCAD, and other Autodesk products. As of 2015, Autodesk has four business partners who provide applications for AutoCAD and for AutoCAD LT for Mac: GALAXY Software, Inventor Schematic 2018, MarkLogic and ThoughtWorks. Additional AutoCAD workflows have been developed by Autodesk partner companies: 3D or Revit Architectural CAD 3D or Revit Architectural CAD is a suite of applications used to create buildings and other structures. It is a "technology that enables architects, engineers and other design professionals to quickly and easily create the 3D models needed to capture design intent and to collaborate on a project." 3D CAD allows for animation, walk-throughs, 3D presentations, 3D rendering and engineering visualizations. 3D or Revit Architectural CAD is cross-platform, and is available on Microsoft Windows, macOS, Linux and iOS. It is also available for architectural and structural design in AutoCAD LT and on Windows platforms. Autodesk Architectural Center Autodesk Architectural Center is an online service which allows one to "establish design intent, collaborate with colleagues on projects, and view CAD drawings and documentation in a web browser." AutoCAD drawings can be uploaded to the service and viewed. Autodesk Architectural Center is cross-platform and has been available since 2010. Unified Project Exchange (UPX) Unified Project Exchange is a cloud-based collaboration service. It provides a central repository of models, documentation and drawings. Autodesk Architectural Center is part of the Autodesk

Enjoy.Q: how can I post my video to youtube with my own account? I use an app called youtube video posting, that has the power of youtube's api. I'm trying to post a video on my own account, and there are no tutorials I found that teach you how to use that app. The only tutorial i found was about using the default youtube app. this is how I post my video: I tried to make something like that, I have no idea where to start, and I have no idea how this app works (and where to start with). If someone could teach me how to post a video to youtube with my own account, and with the app from the link, I would appreciate it. A: Here's a tutorial on how to post a video with a computer program like youtube-uploader.com. Until recently, mainstream efforts at portraying black Americans have centered on the plight of the individual and on the uplifting

Work with PDFs and other non-PDF files: Import and copy markup from other non-PDF files, including *.xls, *.doc, and *.ppt. You can also use Zoom and Pan to navigate. (video: 2:15 min.) 3D Modeling: Create a 2D X, Y, and Z offset in your 3D models. Specify negative X, Y, or Z values to place your model further away from the camera. (video: 1:10 min.) New: Add and move 3D annotative text to any 3D model. (video: 1:20 min.) Web services: Use web services to access and incorporate data from other applications. For example, you can use web services to add dynamic site coordinates to a drawing. (video: 1:40 min.) Open files on a mobile device: Bring your files, drawings, and data files with you on a mobile device. You can view and annotate from any device. (video: 2:10 min.) New: Expand selections in your document using multi-touch gestures. (video: 1:45 min.) Bidirectional: Use bidirectional (right-to-left) text. You can specify how your text will be displayed in the document, and it will update automatically. You can use bidirectional text to write or display data in Arabic, Hebrew, Cyrillic, or other languages. (video: 1:20 min.) Printing: Print using a Web server. You can print from any device connected to the Internet and save to a local network. You can use a combination of native printing and Web printing. (video: 2:10 min.) Create Custom Annotations: Create custom annotations for data like company contact information, data, and company logos. You can use different shapes, colors, and fonts to identify your data. (video: 1:35 min.) Annotative: Make more precise, and at the same time, easier to use annotations. You can create dynamic annotations to display data such as coordinates, contour lines, and area, as well as use and edit text. (video: 1:50 min.) Toolbars: Add a tabbed navigation toolbar for faster access to your work. You can also save your commonly used commands to the toolbar. (video:
