FIFA is the brand name of a series of sports games produced by Electronic Arts. They are the most popular sports game worldwide and are especially popular in Europe and Asia.[1] The series often pioneered trends in

sports games, such as licensed video games, licensed stadiums, and realistic player appearance, in contrast to the Mario Kart style of sports games that preceded it.[2] Many FIFA games have had success in console titles such as the Madden series, and in arcade titles such as EA Sports FIFA Street.[3][4] The game has also been used as a testing ground for new, emerging technologies by Electronic Arts, including the introduction of Frostbite technology for the 2010 FIFA World Cup edition of the series, introduced the same year.[2] The 2011 edition of FIFA was used to aid the development of multiple technology advances. For instance, the audio technology was used to create the acoustic modelling in the stadiums.[5] Three years later, the engine was also used to create the client version of FIFA Online 3.[6]

Features Gameplay The most notable new feature in FIFA 22 is "Powered by Football". This new feature allows the players to feel the vibrations of shots, tackles and dribbles - with the sounds and vibrations realistically timed to the actions of the player. It also allows referees to show red and yellow cards and a yellow or red card for fouls in real time.[8] The powered by Football feature is not available in the Ultimate Team mode. The

gameplay of FIFA 22 was improved in several areas. Player movements are more detailed and easier to control. The game engine no longer creates lag when the ball is in the air, and the ball obeys physics calculations in more detailed manners. The offside law was reworked in FIFA 22, and the new offside law can be exploited by players in both the attacking and defending team. The attacking player can be offside if they pass the ball, but they must be open to receive the pass. FIFA 22 also includes more advanced shooting mechanics than the previous game. The new 'smart shooting' system can analyse the player's body and predict the trajectory of the shot. This feature is a part of the overall gameplay engine, and the game engine learns how to handle players with different shooting techniques. The game will learn a player's body shape and shooting style for each game mode, and will suggest adjustments accordingly. Although the game engine doesn't affect the type of shot a player shoots, it
