TP Pinouts is a handy app, designed to help users better understand the connection cross-reference for devices that run intricate circuitry, such as tablets. While certainly a beneficial app for the Android users, it can also help those who are attempting repairs or diagnostics for such items. The app gathers data from a user's device, which will allow them to view a comprehensive selection of tablets, phones, and even multiple brands. Information gathered from the app will include the brand, model, date of manufacture, and other pertinent data for each of the available items. Users will be able to click on individual items to provide further details for the details, including the connection cross-reference, and a number of back and forth options, that will help in the selection process. When a pin is selected, a 3D model of that pin will be shown, which will allow users to better understand the connection cross-references, as well as be able to see the location of the points, for use with a pinpointing process. The application can further aid in the selection process, by providing users an option for either highlighting the TP/EDL points, in order to better identify those points, or even magnifying the imagery, in order to better see the details.
