A: You can use the basic string replace pattern `\p{Print}` since that it's a unicode normalization form // Your code let `input = `Another simple string for the regex to work``; let `reg = /\p{Print}/g`; // Print unicode char you're using to match the regex // `reg = /[a-zA-Z]/g`; `input = input.replace( reg, "" )`; // Output `console.log( input )`; It is a long-held position among the geo-political sphere of the United States that the country must seek diplomatic solutions to resolve conflicts. This is coupled with the belief that the US must push towards having its allies play a greater role on the world stage. The Middle East peace process is currently the most critical issue on the agenda of US foreign policy and this issue has long been the topic of contention between the Palestinian Authority (PA) and the Zionist regime of Israel. As a result of this policy, the US government has been investing billions of dollars in the peace process and this has paid off in spades to date. The US and Israel Signed the Oslo Accords Israeli Prime Minister Yitzhak Rabin and PLO Chairman Yasser Arafat are both included in the 2015 Time 100 list of the world's most influential people. While the Israeli Prime Minister is classified as an 'Influencer' for political reasons, the Palestinian leader of the PLO is classified as an 'Activist.' Between 1993 and 1995, the PLO and Israel signed a series of agreements known as the Oslo Accords. The final document was signed by the then Israeli Prime Minister Yitzhak Rabin and Arafat in the White House on 11 September 1995. The Oslo Accords were initially aimed at creating a Palestinian state in the West Bank and the Gaza Strip. In addition to this, the Oslo Accords allowed for the creation of diplomatic offices to be established in order to work towards the peace process between Israel and the Palestinians. These offices consisted of four standing committees made up of officials from the Palestinian Authority (PA), the European Union (EU), the United Nations (UN) and the United States. Each standing committee was created in order to oversee the running of peace talks between Israel and the PA. Backs and Rebuffs of the Oslo Accords

A: It seems that the line `url_p = urlparse(self.request.get_full_path().split('?')[0])` in your view is not correct. You shouldn't parse the original request path. Instead parse the path component of the base URL you get from the request in context, e.g. using `urlparse(url)`. But to answer your question: You don't need to parse it to get the name of the URL path component. You can just use `request.path_qs` instead of `request.get_full_path()`. The present invention relates generally to the field of network processors, and more particularly to a system and method for implementing an efficient string comparison technique in a network processor. Some conventional systems include a network processor that performs a string search operation by comparing a search pattern against a data string. Specifically, the network processor compares a portion of the search pattern against the data string, and determines whether the search pattern partially matches the data string. If the search pattern partially matches the data string, the network processor identifies one or more matches. The string comparison operation may be used to identify one or more words or phrases within a data string, such as a document or text, in which case the network processor may identify a matching substring. The string comparison operation is relatively slow compared to other operations performed by the network processor. Q: What are these lines for, in terms of color and/or shading, in the (deliciously morose) Chandraghanta? I am not an artist, and I do not read Hindi, so I can not find out exactly what the lines mean, but I can easily see what they add up to. The lines, as far as I can tell, appear in various places, some standing out better than others, but on the whole they almost look like inky black blotches. Question: What do they represent, in terms of their colour and/or shading? A: Chips, plates, and various other shapes are represented by a variety of symbols. The particular one I show here is one form for the shape of a vase. Its a pictorial image of a vase. In the case of the vase, the front is made of the fire/flame/sun symbol which is represented by the red line of the vase. The shape of the vase is represented
