All right, the drivers are installed and I have re-booted and all is well. I will post again after I have tried some diagnostics. Thnx for this information. A: Even after installing the KWP2000Plus drivers, getting the M105 to work is still not possible. As a temporary fix the KWP Plus NCM works. It gives the same functionality as the KWP2000plus but at a lower price. It uses the "must have" USB-to-serial adapter that is used with every computer and also works with iPad and PC. It is a USB-to-serial adapter

and is used with the KWP2000plus but works with any computer. I later found that I had the wrong USB port. I had connected the M105 to the wrong port. The KWP2000plus should have been connected to the other port. Q: Is it possible to get AlarmManager to only start an activity at a specific time? Lets say that I had an app with alarms set up to look like this: first alarm looks like this:

```
alarmManager.set(AlarmManager.RTC_WAKEUP,  
calendar.getTimeInMillis() + 30 * 1000, pendingIntent);
```

second alarm looks like this:

```
alarmManager.set(AlarmManager.RTC_WAKEUP,  
calendar.getTimeInMillis() + 50 * 1000, pendingIntent);
```

If I had a button that dismissed an activity (like a

ToastActivity), what would it look like? A: Sending a

broadcast intent to the toast activity would look like this:

```
Intent intent=new Intent(this,YourActivity.class);
```

```
intent.setFlags(Intent.FLAG_ACTIVITY_NEW_TASK);
```

```
intent.putExtra("extraData", /*whatever data you want to  
send*/); sendBroadcast(intent);
```
